DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3, drawn to a protein.

Group II, claim(s) 4-7, 9-13 drawn to nucleic acid and nucleic acid constructs and a method of making a protein by recombinant means.

Group III, claim(s) 8, 14 and 15 drawn to an antibody.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The protein in Group I may be used to regulate differentiation of the testis while the nucleic acid sequence in Group II is used to encode proteins. The protein and nucleic acid have different uses and structures. The protein in Group I may be used to regulate differentiation of the testis while the antibody of Group III binds to the protein. The protein and antibody have different uses and structures. The nucleic acid sequence of Group II and the antibody of Group III are unrelated as the nucleic acid sequence is used to encode proteins while the antibody binds to proteins. The nucleic acid sequence and the antibody have different structures and functions. Further, a DNA that encodes a protein that plays a role in the differentiation of testicular cells that has at least 15 nucleotides, as described in claim 9, is known in the art. Zon et al. teach DNA that encodes a Tbc1 polypeptide which like tesmin plays a role in testicular regulation (col. 2, lines 39-43 and col. 3, lines 23-34; see SEQ ID NOS: 1 and 2). This sequence would hybridize under some conditions and the DNA that encodes it. By sufficient addition deletion and/ or addition of SEQ ID NOS: 4 or 1, one could obtain the protein of Zon et al. Further Zon et al.'s sequence comprises the nucleotide sequence of any one of SEQ ID NOS; 1 to 3 and comprise at least 15 nucleotides. Thus, the invention in claim 9 is known in the art and Groups I-III lack a common, novel step and lack unity of invention.

Art Unit: 1653

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

A telephone call was made to Stephen Maebius on June 9, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
